**Do not return to dealer, they are not
equipped to handle your requests.**

714441213

Storage Area: **115 Sq. Ft.** **734 Cu. Ft.**
 10,7 m² **20,8 m³**

CAUTION: SOME PARTS HAVE SHARP EDGES. CARE MUST BE TAKEN WHEN HANDLING THE VARIOUS PIECES TO AVOID A MISHAP. FOR SAFETY SAKE, PLEASE READ SAFETY INFORMATION PROVIDED IN THIS MANUAL BEFORE BEGINNING CONSTRUCTION. WEAR GLOVES WHEN HANDLING METAL PARTS.

BUILDING DIMENSIONS * Size rounded off to the nearest foot

*Approx. Size	Base Size	Exterior Dimensions (Roof Edge to Roof Edge)			Interior Dimensions (Wall to Wall)			Door Opening	
		Width	Depth	Height	Width	Depth	Height	Width	Height
10' x 12'	121" X 143 1/4"	123 1/4"	145 3/4"	82 1/8"	118 1/4"	140 1/2"	80 7/8"	55 1/2"	69 1/4"
3,0 m x 3,6 m	307,3 cm x 363,9 cm	313,1 cm	370,2 cm	208,6 cm	300,4 cm	356,9 cm	205,4 cm	141,0 cm	175,9 cm

BEFORE YOU BEGIN....

A03

Owner's Manual

Before beginning construction, check local building codes regarding footings, location and other requirements. Study and understand this owner's manual.

Important information and helpful tips will make your construction easier and more enjoyable.

Assembly Instructions: Instructions are supplied in this manual and contain all appropriate information for your building model. Review all instructions before you begin, and during assembly, follow the step sequence carefully for successful results.

Flooring and Anchoring: Your storage building must be anchored to prevent wind damage. A base is necessary to construct a square and level building. Anchoring and base materials are not included with your building. We recommend the combined use of an **Arrow Floor Frame Kit** and an **Arrow Anchoring Kit** as an effective method of securing your building to the ground (Available at your local dealer, Arrow's website arrowsheds.com or call Arrow's Customer Service department 1-800-851-1085) or you may construct a base and anchoring system of your choice. Your assembly instructions provide information on a few methods commonly used to secure and level a storage building.

Parts and Parts List: Check to be sure that you have all the necessary parts for your building.

- All part numbers can be found on the parts. All of these numbers (before the -) must agree with the numbers on the Parts List page.

- If you find that a part is missing, include the model number of your building and contact:

Arrow Shed, LLC Customer Service Department
1101 North 4th Street Breese, Illinois 62230

1-800-851-1085 or assist@arrowsheds.com

- Separate contents of the carton by the part number while reviewing parts list. The first few steps show how to join related parts to make larger sub assemblies which will be used later.

- Familiarize yourself with the hardware and fasteners for easier use during construction. These are packaged within the carton. Note that extra fasteners have been supplied for your convenience.

PLAN AHEAD....

A04

Watch the Weather: Be sure the day you select to install your building is dry and calm. Do not attempt to assemble your building on a windy day. Be careful on wet or muddy ground.

Teamwork: Whenever possible, two or more people should work together to assemble your building. One person can position parts or panels while the other is able to handle the fasteners and the tools.

Tools and Materials: These are some basic tools and materials you will need for the construction of your building. Decide which method of anchoring and the type of base you wish to use in order to form a complete list of the materials you will need.

Selecting and Preparing Your Site: Before assembly, you will want to decide on a location for your building. The best location is a level area with good drainage.

- Allow enough working space for ease of moving parts into position during assembly. Be sure there will be enough space at entrance for doors to open fully and enough space around the building to be able to fasten the panel screws from the outside.

- Before you begin the first steps in assembling your parts, a base should be constructed and an anchoring system should be ready to use.

SAFETY FIRST....

Safety precautions are important to follow throughout the construction of your building.

•Care must be taken when handling various pieces of your building since some contain sharp edges. Please wear work gloves, eye protection and long sleeves when assembling or performing any maintenance on your building.

•Keep children and pets away from worksite to avoid distractions and any accidents which may occur.

•Never concentrate your total weight on the roof of the building. When using a step ladder make sure that it is fully open and on even ground before climbing on it.

•Practice caution with the tools being used in the assembly of this building. Be familiar with the operation of all power tools.

•Do not attempt to assemble the building if parts are missing because any building left partially assembled may be seriously damaged by light winds. Call 1-800-851-1085 or assist@arrowsheds.com

•Do not attempt to assemble the building on a windy day, because the large panels acting as a "sail", can be whipped about by the wind making construction difficult and unsafe.

CARE & MAINTENANCE....

A06

Finish: For long lasting finish, periodically clean and wax the exterior surface. Touch-up scratches as soon as you notice them on your unit. Immediately clean the area with a wire brush; wash it and apply touch-up paint per manufacturer's recommendation.

Roof: Keep roof clear of leaves and snow with long handled, soft-bristled broom. Heavy amounts of snow on roof can damage building making it unsafe to enter. In snow country, Roof Strengthening Kits are available for most Arrow Buildings for added protection against heavy snow accumulation. Contact **Arrow** as outlined on the Ordering Accessories page to place an order.

Doors: Always keep the door tracks clear of dirt and other debris that prevent them from sliding easily. Lubricate door track annually with furniture polish or silicone spray. Keep doors closed and locked to prevent wind damage.

Fasteners: Use all washers supplied to protect against weather infiltration and to protect the metal from being scratched by screws. Regularly check your building for loose screws, bolts, nuts, etc. and retighten them as necessary.

Moisture: A plastic sheet (vapor barrier) placed under the entire floor area with good ventilation will reduce condensation.

Other Tips....

- Wash off inked part numbers on coated panels with soap and water.
- Silicone caulking may be used for watertight seals throughout the building.

Do not store swimming pool chemicals in your building. Combustibles and corrosives must be stored in air tight approved containers.

Keep this Owner's Manual and Assembly Instructions for future reference.

ACCESSORIES....

ROOF STRENGTHENING (heavy snow load) KITS

Extra roof beams and gable braces designed for added protection against heavy snow accumulation. Increases the strength of your roof by 50%.

ANCHOR KITS

Model No. AK4

Anchor Kit contains heavy-duty steel augers, 60' (18 m) of steel cable and 4 cable clamps. No digging or concrete pouring, just insert cable under roof, over roof beams, into augers and twist augers into the ground. For buildings larger than 10'x9' (3,0 m x 2,6 m), use 2 kits.

Model No. AK100

New concrete anchor system permits anchoring any size Arrow building directly to a concrete slab. Each kit contains heavy-duty, hot-dipped galvanized steel corner gussets and perimeter clips which fit over the floor frame and lag bolt into a concrete slab. Full assembly instructions and a 1/4" masonry drill bit are included.

Model No. AK600

Earth Anchor Kit anchors any size Arrow building to the ground. Each kit contains heavy duty, hot-dipped galvanized steel corner gussets and 4 earth anchors.

TOOL HANGING RACK

Model No. TH100

The perfect tool organizer. Twin 25 1/2" (64,8 cm) steel channels plus five heavy-duty snap-in hangers and a small tool holder for screwdrivers, pliers, etc. Holders slide along channel for fully adjustable spacing. Great for garage, basement, or the back of any door. Fits all Arrow storage buildings.

FLOOR FRAME KITS

MODELS FB47410, FB5465, FB106-A
FB109-A and FB1014-A

A simple new floor frame system made of heavy-duty, hot-dipped galvanized steel. Use as base for plywood, sand or stone.

ATTIC KIT / WORKBENCH KIT

Model No. AT101

Heavy-duty galvanized steel bars that fit all 10' (3,0 m) wide Arrow buildings. They install quickly and easily to help organize space and create more useable space as an attic or workbench. Will hold up to 250 lbs. (113 kg) evenly distributed.

Some drilling required to fit buildings without mid-wall bracing.

SHELF UNITS

Heavy-duty, galvanized steel shelf units help organize storage space. They easily mount on the wall or sit on the floor. Fits all Arrow buildings.*

Model No. SS404

- Makes 8" to 12" (20,3-30,5 cm) wide shelves in any length.
- Brackets, braces, hardware included.
- Lumber is not included.

Model No. SS900-B

- Grey color
- 3 shelves
- Holds up to 85 lbs. (38 kg) (even weight distribution)

* Some drilling required to fit buildings without mid-wall bracing.

ORDERING ACCESSORIES....

A08

02/13

We recommend that you purchase accessory items from your local storage building dealer whenever possible; however, because the full line of accessories is not always available from all dealers, **Arrow** is offering them to you on a direct basis.

There are two ways to order Arrow Storage Building Accessories:

Option 1

Accessories can be purchased
through

arrowsheds.com

Option 2

Order accessories by telephone
using your MasterCard or Visa credit card.

Call toll free **1-800-851-1085**
(Customer Service).

Allow 2 weeks for delivery.

SPECIAL NOTE:

If your accessory is shipped via truck line a day time phone number is required to arrange delivery. If no one is available to sign for the delivery, you may be subject to a re-delivery charge assessed by the carrier.

Base

The Base For Your Building

No matter which of the options below you choose for a base, an ARROW ANCHORING KIT is recommended as an effective method of properly securing your building after assembly is complete.

OPTION 1: Directly on ground (earth)

Assemble your building directly on level ground (grass, dirt, rock, sand, etc.). If you choose this option Arrow has a simple kit available to provide a floor inside the shed to keep stored items off the ground. This kit can be used to support a plywood floor (wood not included) or be filled with sand/rock to provide a solid surface. (Order No. FB1014-A or 68387-A)

Allow 1 - 2 hours for construction.

OPTION 2: Wood Platform

If you decide to build your own base, be sure to select the appropriate materials.

These are the recommended materials for your base:

- 2 x 4's (38 mm x 89 mm) Pressure Treated Lumber
- 5/8" (15,5 mm) 4 x 8 (1220 mm x 2440 mm) Plywood-exterior grade **NOTE:** Pressure Treated Lumber must not be used where it will make contact with your storage building. The properties of Pressure Treated Lumber will cause accelerated corrosion.

If Pressure Treated Lumber comes in contact with your storage building your warranty will be voided.

- 10 & 4 penny Galvanized Nails ● Concrete Blocks (optional)

The platform should be level and flat (free of bumps, ridges etc.) to provide good support for the building. The necessary materials may be obtained from your local lumber yard.

To construct the base follow instructions and diagram.

Construct frame (using 10 penny galvanized nails)
Measure 16"/24" (40,6 cm/61,0 cm) sections to construct inside frame (see diagram)
Secure plywood to frame (using 4 penny galvanized nails)

Allow 6 - 7 hours for construction.

Note: Platform/Slab will extend 9/16" (1,4 cm) beyond floor frame on all four sides. Seal this 9/16" (1,4 cm) of wood with a roofing cement (not included), or bevel this 9/16" (1,4 cm) of concrete when pouring, for good water drainage.

OPTION 3: Concrete Slab

The slab should be at least 4" (10,2 cm) thick. It must be level and flat to provide good support for the frame.

The following are the recommended materials for your base.

- 1 x 4's (19 mm x 89 mm) (will be removed once the concrete cures)
- Concrete ● Sheet of 6 mil plastic
- We recommend for a proper strength concrete to use a mix of:
1 part cement ● 3 parts pea sized gravel ● 2 1/2 parts clean sand

Prepare the Site/Construct a Base

1. Dig a square, 6" (15,2 cm) deep into the ground (remove grass).
2. Fill up to 4" (10,2 cm) in the square with gravel and tamp firm.
3. Cover gravel with a sheet of 6 mil plastic.
4. Construct a wood frame using four planks of 1x4 (19 mm x 89 mm) lumber.
5. Pour in concrete to fill in the hole and the frame giving a total of 4" (10,2 cm) thick concrete. Be sure surface is level.

Note: Finished Slab dimensions, with lumber removed.

Allow 3 - 5 hours for construction and a week for concrete curing time.

Anchoring

A10

Anchoring Down The Building

It is important that the entire floor frame be anchored after the building is erected.

Below are recommended ways of anchoring.

Arrow Anchoring Kit: (Model No. AK4 or 60298)

Recommended for use with **any** suggested **base**.

Contains: 4 Anchors with Cable, Clamps and installation instruction.

Anchoring into Wood/Post:

Use 1/4" (6 mm) Wood Screws. There are 1/4" (6 mm) dia. holes provided in the frames for proper anchoring.

Arrow Anchoring Kit: (Model No. AK100 or 68383)

Recommended for use with the **concrete** base.

Contains: Corner gussets, perimeter clips, hardware, 1/4" masonry drill bit and installation instruction.

Anchoring into Concrete:

1. For poured concrete slab or footing or patio blocks: Use 1/4" x 2" (6 mm x 51 mm) Lag Screws.
2. For Anchor Post of Concrete poured after building is erected: Use 1/4" x 6" (6 mm x 152 mm) Lag Screws.

30	10395	Side Wall Angle	4	
31	8934	Ramp	1	

Assembly by Key No.

Step 1

SV14 ctr

● Parts Needed For ● Floor Frame Assemblies

- 8934 Ramp (1)
- 9367 Front Floor Frame (2)
- 8936 Rear Floor Frame (2)
- 10392 Side Floor Frame (4)

(8)

(13)

The front floor frame is made up of three pieces. The side floor frames and the rear floor frame are made up of two pieces. The holes in these pieces will align when the pieces are positioned with correct amount of overlap. The illustrations below show the proper overall length for the sides, rear and front. Proceed as follows:

1 Place the **front floor frames** as shown. Center the **ramp**, with drain holes facing outside, on top of the two front floor frames. Join the frames by inserting eight screws.

STEP
1

Front Floor
Frame Assembly
119 3/8" 303,2 cm

2 Overlap the **side floor frames** and the **rear floor frames** as shown. The holes in these pieces will align when the pieces are positioned with correct amount of overlap. See the illustrations below for the proper overall length of the side and rear floor frames. Join the frames by inserting four/five bolts into each frame set as shown.

STEP
2

Side Floor Frame 141 5/8" 359,7 cm

Rear Floor Frame 119 3/8" 303,2 cm

3 Double check the length of each and set these pieces aside for later use.

STEP
3

141 5/8" 359,7 cm

Sides

141 5/8" 359,7 cm

119 3/8" 303,2 cm

Front & Rear

119 3/8" 303,2 cm

Step 2

SX15 ctr

● Parts Needed For ● Frame Assemblies

- 10396 Rear Wall Angle (2)
- 10395 Side Wall Angle (4)

The main frame pieces reinforce the walls. This piece will later be installed at the top edge of the side walls and the rear wall. Proceed as follows:

1 Overlap the **rear wall angle** pieces as shown in the figure and fasten them together with *one bolt in the single, large hole*.

2 Make two **side wall angles** by overlapping the side wall angle pieces as shown. Fasten each set together with two bolts thru the second set of large holes from each end.

3 Double check the length of each and set these pieces aside for later use.

STEP
1

STEP
2

Step 3

SV16 ctr

● Parts Needed For ● Roof Beam Assemblies

● 10397 Roof Beam (8)

The roof beams join the two gables and support the roof panels. The main roof beam is made up of four pieces overlapped back to back at the center. The left and right roof beam assemblies are made up of two pieces.

Hint: These pieces are force-fitted, so you may have to press hard to join them together.

1 Place one end of a roof beam inside another roof beam so that the six holes in each piece align. Make four sets of roof beams by repeating this procedure. **Do not insert bolts yet.**

2 Take two of the pressed-together roof beams and join them as shown to form the main roof beam assembly. Hold the assembly together and fasten with 14 bolts. Build **only one** Doubled Beam Assembly.

3 Fasten the other two pressed-together roof beams with eight bolts to make the left and right roof beam assemblies.

4 Double check the length of each and set these pieces aside for later use.

STEP
1

STEP
2

Build **one** Doubled Main Roof Beam Assembly for Peak in Roof

STEP
3

Build **two** Single Beam Assemblies

Step 4

A17 ctr

● Parts Needed For ● Door Track Assembly

- 6403 Door Track Splice (1)
- 9366 Door Track (2)

The door track assembly supports the sliding doors and reinforces the front wall. It is made up of three pieces.

1 Using the **door track splice**, (painted), join the **door track** (galvanized) pieces end-to-end as shown.

2 Insert four screws *from the under-side only*.

Hint: The holes in the top side of the door track assembly are for fastening the gable to the top of the front wall in a later step.

NOTE:
Door Track Splice (painted part)

STEP
1

STEP
2

3 Position **door slides** onto the legs, from the end of door track assembly, as shown in the end view.

4 Set this piece aside for later use.

STEP
3

STEP
4

300,0 cm

END VIEW

118 1/8"
300,0 cm

Step 5

SW18 clr

● Parts Needed For ● Floor Frame

- Front Floor Assembly (1)
- Side Floor Assembly (2)
- Rear Floor Assembly (1)

(8)

(2)

1 Assemble the four corners of the floor frame using two screws at each corner as shown. At the front corners fasten bolts through from the bottom with nuts on top.

STEP
1

2 Measure the floor frame diagonally. When the diagonal measurements are equal, the floor frame is square.

NOTE

If using a wood platform or concrete slab do not fasten the floor frames to your base at this time. You will anchor the building after it is erected.

When Diagonal Measurements are Equal the Floor Frame is Square.

STEP
2

The floor frame *must be square and level* or holes will not align.

Step 6

SX19 ctr

● Parts Needed For ● Corner Posts

● 5288 Corner Post (4)

NOTE

The remainder of the building assembly requires many hours and more than one person. Do not continue beyond this point if you do not have enough time to complete the assembly today. A partially assembled building can be severely damaged by light winds.

1 Position **corner posts** at the corners of the floor frame as shown. Fasten the corner post to the floor frame with two screws.

Support the corner posts with stakes until top frames are attached.

STEP

1

Step 7

SX20 ctr

● Parts Needed For ● Top Frames

- Door Track Assembly (1)
- Rear Wall Angle Assembly (1)
- Side Wall Angle Assemblies (2)

The top frame pieces give rigidity to the side walls and provide a surface for attaching the gables which support the roof.

1 Fasten the **door track assembly** (holes on top) behind the top of the front corner posts using 1 screw in each corner. See the figure.

2 Fasten the **rear wall angle** behind the inside top of the rear posts using 2 screws in each post.

3 Fasten the **side wall angles** behind the inside top of the side posts using 2 screws in each corner. Side wall angles overlap rear wall angle in corners.

Step 8

SX21 ctr

● Parts Needed For ● Splice Post

● 5287 Splice Post (3)

(18)

The splice posts support the walls.

1 Position **splice post** at the center of the rear wall and fasten using 4 screws into rear wall angle and 2 screws into rear floor frame.

Hint: Measure or count holes to determine if post is centered on angle.

2 Fasten splice posts to the sides of building in the same manner.

Step 9

SX22 ctr

● Parts Needed For ● Door Jamb

● 7311 Door Jamb (2)

The door jambs reinforce the door opening and provide an attractive trim.

1 Fasten the top of the **door jambs** to the door track with 2 screws. Do the same for the bottom into frame. Notched edge faces toward center of building.

Step 10

SX23 ctr

● Parts Needed For ● Studs/Front Channel

- 9344 Siding Stud (10)
- 9365 Front Wall Channel (2)

The studs provide a surface for attaching the siding panels.

1 Following dimensions, measuring from the ends of angles place 2 **studs** between each corner and splice post on the sides and 1 on the rear of building. Position stud inside top angle and fasten with a screw at the lower hole.

2 Rest bottom tab (large hole) outside floor frame. Do not fasten tab at this time. Repeat procedure for the remaining studs around the building.

3 Fasten **front wall channel** into position behind corner post and door jamb. Fasten using three screws.

Step 11

SX24 ctr

● Parts Needed For ● Side Siding

● 6287 Side Siding (12)

Each screw and bolt in the wall requires a washer.

CORRECT

INCORRECT

STEP
4

1 Slide **side siding** into channels of corner and splice posts, flat edge upward, bottom edge down resting on floor frame. Always follow this pattern. Fasten bottom edge and tab of stud to floor frame using screws. Fasten center to stud with screws. Do not fasten top edge yet.

2 Install **side siding** as before. Note how the slot in bottom edge must overlap flat edge of last siding. Fasten both siding panels to stud at this overlap.

3 Install **side siding** to the top as before.

4 From inside building, fasten siding to corner posts and splice post using screws.

5 Repeat steps 1 through 4 opposite side of building.

NOTE

Be careful to install the correct panel in each position as shown.

The floor frame *must be square and level* or holes will not align.

Be certain all siding overlaps are fastened with a single screw

Step 12

SX25 ctr

● Parts Needed For ● Rear/Front Siding

- 8736 Rear Siding (6)
- 8737 Front Siding (6)

1 Slide **rear siding** into channel of corner and splice posts fastening to rear frame as shown in previous step.

2 Install **rear siding** to complete each section of rear wall. Fasten top center of last siding to rear angle.

3 Slide **front siding** into channels of corner post and door jamb. This siding is fastened from the inside, using screws into post and jamb.

4 Install **front siding** to complete both front sections.

STEP
3

Front Panels Fasten at
Corners & Door Jamb
from the Inside

STEP
4

Step 13

SX26 ctr

● Parts Needed For ● Gable Assemblies

- 6000 Right Gable (2)
- 6001 Left Gable (2)
- 5971 Roof Beam Bracket (4)

The gables go on top of the front and rear walls to support the roof beams.

NOTE

The gables are packed nested together and might be mistaken as one piece. Carefully separate them before continuing.

1 Attach the four **roof beam brackets** to the gables using two bolts, washers and nuts.

NOTE

Mounting leg of bracket must face toward center of gable and holes closest together must be on top

STEP

1

Step 14

SX27 clt

● Parts Needed For ● Gables/Braces

- Left Gable Assemblies (2)
- Right Gable Assemblies (2)
- 6635 Gable Brace (2)

1 Lift and fasten a right and left gable, under angle at corner, to the rear wall angle with screws.

2 Join the **left** and **right gables** together with a **gable brace** using a bolt in the bottom hole *only*.

3 Repeat Steps 1 & 2 for the door track on the front of building, except for the **track supports**, fasten as shown.

STEP
1

Gable

6635 Gable Brace

STEP
2

Step 15

SX28 ctr

● Parts Needed For ● Roof Beams

- Main Roof Beam Assembly (1)
- Single Roof Beam Assemblies (2)

1 Spread the two halves of the double roof beam and fasten to the gable brace of the front gable.

2 Fasten the other end of the double roof beam to the gable brace of the rear gable.

3 Fasten the **single roof beams**, *small holes on top*, as shown using bolts and nuts.

STEP
1

Spread Two Halves Of
Roof Beams

STEP
2

Step 16

SX29 ctr

● Parts Needed For ● Right Roof Panel

● 6640 Right Roof Panel (1)

Installing the roof panels is best done with a step ladder. Begin installing roof panels at the back right corner of the building. Each screw and bolt in the roof requires a washer.

NOTE

Measure the building diagonally again and make adjustments to make sure the building is square and level. This will make the roof panels fit better, and holes will align. Don't anchor the floor frame.

NOTE

If a **Roof Beef-Up Kit** was purchased, assemble prior to attaching the roof panels.

1 Locate all the roof panels by their numbers and place them on the ground alongside the building in their proper positions.

2 Position the **right roof panel** at the back right corner and fasten to the gable and roof beams using screws and bolts and nuts as shown. *Do not fasten the lower end of the panels to the side wall angles at this time.*

Hint: Attach fasteners in order shown in diagram.

Step 17

SX30 ctr

● Parts Needed For ● Ridge Cap & Panels

- 6641 Left Roof Panel (1)
- 6529 Roof Panel (2)
- 6869 Ridge Cap (1)

1 Install a **left roof panel 6641** at the left rear corner of the roof.

2 Cover the joint at the peak with weather stripping tape. Unroll the tape and press it down over the opening at the ridge as you install each roof panel. Do not cut the tape at this time.

3 Install two **roof panels 6529** working side to side. *Do not fasten the lower end of the panels to the side wall angles at this time.* Continue weather stripping the ridge opening.

NOTE

Narrow roof panel crimped rib is overlapped by wide rib of adjacent panel where possible

4 Install the first **ridge cap 6869** on the completed roof section using bolts and nuts. Do not fasten the ends of the ridge cap at this time.

5 Fasten the roof panel ribs, **peak cap** and ridge cap together using bolts and nuts.

NOTE

If roof beam holes do not line up with the roof panel holes, shift the building from left to right. If this does not help, your building may not be level. Shim the corners until holes line up.

Step 18

SX31 ctr

● Parts Needed For ● Ridge Cap & Panels

- 6868 Ridge Cap (1)
- 6529 Roof Panel (4)
- 6869 Ridge Cap (1)
- 6641 Left Roof Panel (1)
- 6640 Right Roof Panel (1)

1 Install the second **ridge cap 6868** overlapping the first ridge cap while installing two **roof panels 6529**. *Hint: The bolts on the ridge cap need to be left loose to move the ridge cap to the side and overlap the ribs of the next roof panel.* Continue weather stripping the ridge.

2 Install the third **ridge cap 6869** overlapping the second ridge cap while installing the remaining two **roof panels 6529**. *Hint: The bolts on the ridge cap need to be left loose to move the ridge cap to the side and overlap the ribs of the next roof panel.* Continue weather stripping the ridge.

3 Install the **left 6641** and **right roof panel 6640** as you unroll the weather stripping tape, and press it down. Fasten the lower end of the panels to the side wall angles using screws and washers.

4 Fasten the roof panel ribs, **peak cap** and ridge cap together using bolts and nuts.

Step 19

SW32 ctr

● Parts Needed For ● Roof Trim

- 6015 Side Roof Trim (4)
- 6014 Side Roof Trim (2)

1 Attach the **side roof trim** pieces to the lower end of the roof panels on each side of the building using screws at each panel overlap.

NOTE

A single screw fastens both trim pieces at the overlap.

2 Using your thumb and index finger, overbend the bottom flange of the side roof trim at the corner inward enough so the right and left roof trim caps fit onto right and left corners.

3 Fasten the roof trim caps to the side trim using a screw.

Step 20

SX33 ctr

● Parts Needed For ● Door Assembly

- 3719 Door Handle Brace (2)
- 10472 Right and Left Doors (2)
- 10497 Horizontal Door Brace (4)
- 6301 Vertical Door Brace (2)

The steps on this page tell how to assemble the right door. You will perform exactly the same procedures for the left door. Each bolt and screw in the door requires a washer. Proceed as follows:

1 Attach the **door handle brace** and **handle** to the **door** with 1 bolt as shown. *Don't tighten the bolt yet.*

2 Swing the door handle brace up to the hole on the center of the door and insert a screw.

3 Hold the **vertical door brace** against the center of the inside surface of the door and turn the screw to hold the vertical door brace and door handle brace in place. Fasten to door above and below center connection using 2 screws.

4 Insert a second bolt in the door handle and tighten both bolts.

5 Put a **horizontal door brace** onto the top edge and bottom edge and fasten with 1 bolt in the center.

6 Attach the **lower door guides and bolts** as shown.

7 Repeat steps 1 through 6 for the **left door**.

Step 21

SW34 ctr

● Parts Needed For ● Door Installation & Adjustment

- Right Door Assembly (1)
- Left Door Assembly (1)

1 From inside the building, put the bottom of the right door assembly (on your left when you are inside the building) behind door jamb into the front frame track.

2 Position the top of the door so that the holes in the door line up with the holes in the door slides.

3 Fasten the door to the door slides using two #10Bx1/2" (13 mm) screws per door slide.

NOTE

The holes in the door slides allow you to adjust the doors. Place the door in the middle holes.

4 Repeat steps 1 through 3 for the left door.

Assembly Instructions for
future reference.**

Anchoring and Floor Frame

Anchoring

Anchor your building at this time.

Floor Frame

If you have purchased a Floor Frame Kit you need to install it at this time.

SOME FACTS ABOUT RUST

Rusting is a natural oxidizing process that occurs when bare metal is exposed to moisture. Problem areas include screw holes, unfinished edges, or where scrapes and nicks occur in the protective coating through normal assembly, handling and use. Identifying these natural rusting problem areas and taking some simple rust protection precautions can help to stop rust from developing, or stop it quickly as soon as it appears.

1. Avoid nicking or scraping the coating surface, inside and out.
2. Use all the washers supplied. In addition to protecting against weather infiltration, the washers protect the metal from being scraped by the screws.
3. Keep roof, base perimeter and door tracks free of debris and leaves which may accumulate and retain moisture. These can do double damage since they give off acid as they decay.
4. Touch up scrapes or nicks and any area of visible rust as soon as possible. Make sure the surface is free of moisture, oils, dirt or grime and then apply an even film of high quality touch-up paint.
