ORIENT LUMBER AND TRIM FOR BEST APPEARANCE

Framing lumber is graded for structural strength and not appearance. Exterior trim is graded for one good side.

Always install the material leaving the best edge and best surface visible. Please remember that these blemishes in no way negatively affect the strength or integrity of our product. (See **Fig. A, B, C.**)

There are multiple ways to level your floor frame. Our recommended leveling method is shown below.
Leveling materials are not included in this kit.

PREFERRED METHOD - 4x4 TREATED RUNNERS

- 3" Screws angled into 4x4.
- (2) at each point frame and 4x4 touch.

Measurements to centers of 4x4's.

12"
(30,5 cm)

12"
(30,5 cm)

MATERIAL REQUIRED

☐ **x2** 4 x 4 x 12' (10,2 x 10,2 x 365,8 cm)
Treated Lumber

☐ **Fasteners for Frame to 4x4.**
(3" screws shown as one option.) Minimum (40) 3" screws / exterior grade.

! Use only wood treated for ground contact and fasteners approved for use with treated wood.

! Always support frame seams.

LEVELING METHODS

- Level under 4x4 runners only.
- Locate leveling material 12" (30,5 cm) from ends of runners and no more than 48" (121,9 cm) apart.
- Asphalt shingles should be used between 4x4 runners and blocks or treated lumber. Never use shingles in direct contact with ground.
- For best results and aiding in water drainage use gravel under each concrete block.

LEVELING MATERIALS

- ☐ Gravel
- ☐ Solid Masonry Blocks in 1", 2", 4" or 8" thickness
- ☐ 2x4 Treated Lumber
- ☐ Asphalt Shingles

! Leveling higher than 16" (40,3 cm) not recommended.

CONCRETE

- If you are building your shed on a concrete foundation see the following page.

CONCRETE FOUNDATION

Your kit contains all materials to construct a wooden floor.
If you choose to install your kit on a concrete slab refer to the diagram below.

Building Size	Actual Size	A	B	C
12' x 8' (365,8 x 243,8 cm)	144" x 96" (365,8 x 243,8 cm)	144 " (365,8 cm)	89" (226,1 cm)	96" (243,8 cm)

Requires:

- ☐ x2 2 x 4 x 12' (5,1 x 10,2 x 365,8 cm)  **MUST be treated lumber.**
- ☐ x2 2 x 4 x 8' (5,1 x 10,2 x 243,8 cm)  **MUST be treated lumber.**
- ☐ x1 Caulk 

 Allow new concrete slabs to cure for at least seven (7) days.

- A treated 2 x 4 (5,1 x 10,2 cm) sill plate is required when installing your shed on concrete.
Hint: Purchase full length treated lumber.
- Use a high quality exterior grade caulk beneath all sill plates.
- Fasten 2 x 4 (5,1 x 10,2 cm) sill plates to slab using approved concrete anchors (**fasteners not included**).
- Check local code for concrete foundation requirements.

NOTES

FLOOR FRAME

STOP!

LEVEL AND SQUARE FLOOR FRAME

Before attaching floor decking, it is important to level and square the floor frame. A level and square floor frame is required to correctly construct your shed.

STOP!

✓ **BEGIN**

- 1 See page 7 for the preferred floor leveling method.
- 2 Use level and check the frame is level before applying floor panels.
- 3 Check for frame squareness by measuring diagonally across corners. If the measurements are the same, the frame is square. The diagonal measurement will be approximately 173-1/16" (439,6 cm).
- 4 When the frame is level and square secure one side of frame to the 4x4 runners using one fastener at ends of each runner. Move to the opposite end of the frame. Secure the frame to 4x4 runners using one fastener at ends of each runner making sure the frame remains square (**Fig. A**).

Fig. A

Once the floor frame is level and square, fasten the frame at each point where the frame contacts the 4x4 runners.

IMPORTANT!

STOP!

Check that the floor frame is level after installing floor panels.
Re-level if needed.

HINT:

- The floor should be used as a level work surface for wall construction.
- Organize your wall sections during sub-assembly to avoid over-handling of the walls.

SHINGLES - NOT INCLUDED -

- Follow directions provided by manufacturer and these instructions.

- ! Familiarize yourself with a 3-Tab Shingle.**

- ! NEVER DRIVE FASTENERS INTO OR ABOVE SEALING STRIPS.**

✓ BEGIN

- 1** Install first starter row upside down and color up with a 1" overhang at back and bottom of roof panel. Use (4) nails per shingle. Starter row must be straight and level all the way across with lower edge of roof deck.

NOTE: If you have installed drip edge install shingles flush to drip edge.

- 2** Beginning at front of shed, install first row of shingles with notch at 1" past roof edge or flush with drip edge.

SHINGLES continued...

- 3** Install second row of shingles flush at top of first row's rain slots. Ensure 1" overhang or flush to drip edge at front, stagger each row.

- 4** Continue installing rows of shingles by staggering at front.

- 5** The shingle over the bend in the roof will be nailed down. You will need 3" to 4" of this shingle to extend downward over the bend for nailing.

Look for either of the following:

- If the rain slot of the shingle installed over the bend is ABOVE the bend and 3" to 4" of it overhangs down over the bend, continue shingling up to the peak. You have enough to nail shingle down over the bend.

- If the rain slot of the shingle installed over the bend is BELOW the bend, install the shingle over the bend and overlap the rain slot to get the 3" to 4" overlap.

! The shingle OVER the bend must be installed with a 3" to 4" overlap **AND** the rain slot above the bend.

SHINGLES continued...

- 6** After shingles are installed over bend, nail down overlap using two roofing nails per tab.

- 7** Continue installing rows of shingles to the peak. At the peak make sure there is a maximum of 5" or less to the rain slot, as shown below. If shingles overlap at ridge cut to peak using a utility knife.

- !** • If more than 5" to rain slot you must install another row of shingles.

- 8** Repeat steps 1 - 7 to shingle the opposite side of your roof. Trim shingles at ridge.

- 9** Once both sides are shingled you need to trim ends. Strike a chalk line 1" from edge.

- 10** Using your shingle hooked blade carefully cut shingles along chalk line.

You have finished shingling your roof. Proceed to capping the ridge.

SHINGLES - RIDGE CAP

- You will finish off the top of the roof with a ridge cap made from shingles.

✓ **BEGIN**

- 1** Cut shingles into THREE pieces. **Hint:** Use cut-off pieces first.

Note: • You will need about 28-30 cut pieces.

- 2** Install first ridge cap flush to shingles at front, as shown.

- 3** Install second ridge cap 5" back, as shown.

SHINGLES - RIDGE CAP

continued...

- 4 Continue installing ridge cap to back of roof.

- 5 Make sure there is 4" (10,2 cm) between the shingle-color and edge of shingles.

- 6 When you have 4" minimum of shingle color cut one piece to cap your roof.

- 7 Install flush to shingles.

You have finished your ridge cap.
